Professional Watercolours Handmade in Canada

In September 2020, I introduced my inaugural line of watercolours, with plans to release additional colours following the completion of the testing process.

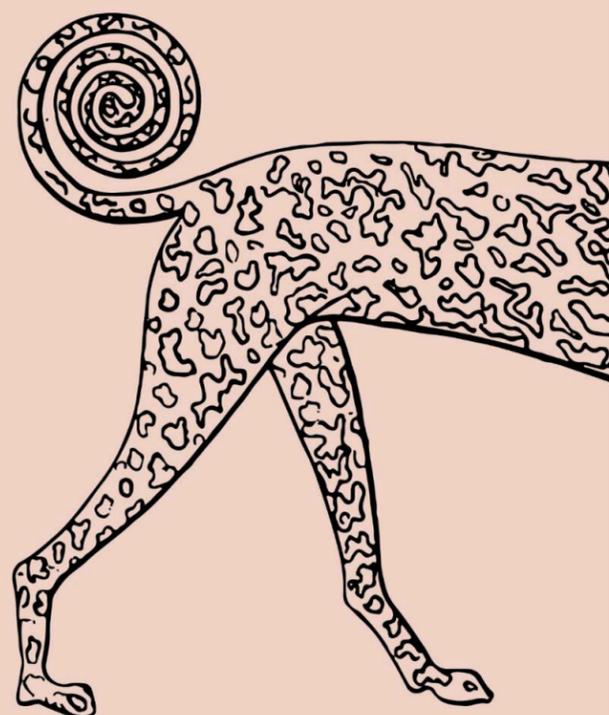

The ENL watercolours are made with high-quality pigments, predominantly mineral-based, which have been tested and trusted by generations of artists. I source the pigments exclusively from responsible vendors, ensuring that no child or unfair labour is involved in their production. All the pigments are sourced from the USA, Canada, and Europe, including the UK, Italy, France, Germany, Poland, and Cyprus.

ENL watercolour binder consists solely of natural ingredients: water, Arabic gum, pure food-grade glycerin, natural Canadian honey, and essential oils.

While some paints may appear softer due to higher binder absorption, I do not add fillers to improve aesthetics. The pigment volume concentration ranges from 50% to 90%, depending on the specific pigment's absorption characteristics.

ENL Watercolours are all hand-made by me in Canada using primarily local raw materials.

Sincerely,
Elena Nahum Leroy
